

USED FOR:

Asphalt Pavers

Combines

Portable augers

Grain carts

Feed systems

U-troughs

Bin unloaders

Feed wagons

Mixers

Post hole diggers

Bulk body trailers

Snow blowers

Ice augers

And much more...

Mounted

HELICOID

Used in screw conveyors for moving bulk materials.

Flighting is cold rolled into a continuous one-piece helicoid screw. It's smooth, hard surface reduces friction wear and power requirements.

Helicoid

QUALITY

Forty years of experience, Drives, Inc. has become a leader in the Auger Industry. As an ISO 9001 registered manufacturer, we believe in integrity of systems, processes and manufacturing standards to provide you quality and satisfaction.

PERFORMANCE

Drives, Inc. assures our customers that we'll provide a product within our tolerances and specifications. We'll manufacture products to fit your product parameters, and demonstrate performance levels you expect from a quality supplier.

SERVICE

Direct contact to our Screw Conveyor Division provides immediate feedback on lead times and material availability. This assures you the fastest input possible for special customer needs. Sales services and auger engineering assistance await your call.

SECTIONAL

For heavier duty requirements on applications requiring a thicker outside diameter flight edge to provide extended wear life. Sectional

flighting is made in full pitch segments to be assembled, welded and mounted.

MOUNTED

Helicoid and sectional flighting can be provided mounted to a tube or pipe. Bushings, gussets, supports, and drilled holes can provide a finished product direct from our factory.

STAINLESS

Helicoid (304 or 409) and sectional (304 or 316) flighting can be provided in stainless steel material.
